

How to Read Your Meter

You will need a LED flashlight to read this meter

Flow Indicator
Visible only when water is running

Display Panel
Read the numbers from left to right to provide a water meter reading.

Light Sensor
Shine a LED flashlight to turn on display panel.

Leak Indicator
An image of a faucet indicates a leak. No faucet indicates no leak.

Rate Indicator

"RATE" means it is displaying the rate of water flow measured in cubic feet per minute. This shows 0.393 **cubic feet** of water **per minute** flowing through the meter. To determine gallons per minute, multiply by 7.48.
 $0.393 \text{ cu. ft. min.} \times 7.48 = 2.94 \text{ gal. per min.}$
In 10 minutes, 29.4 gallons of water will pass through this meter. **Hour: 176.4**

gallons; **Day: 4,233 gallons; Month: 131,225 gallons.** Every six seconds the display panel will alternate between the rate of flow and total water use .
