Location Impounded: 2300 block of Hoover Ave
Date: March 13th
Available for adoption if not claimed: March 18th
(26-4027)

ADOPTION CATS

NO CATS FOR ADOPTION

MANDAN IMPOUNDS

(Contact Mandan PD for current information 667-325)

Breed: Shepherd mix
Gender: Female
Color: Black and brown
Location Impounded: TP Motel
Date: March 9th
Available for adoption if not claimed: March 14th
(MDN 26-00033985)

Animals Returned To Owners!

Adopted Animals!

Rescued Animals!

THINGS TO THINK ABOUT!

With cold weather approaching don't forget your four footed friends!

***Be sure they have access to a warm, solid shelter to protect from the wind, plenty of non-frozen water, and food.**

***When walking your pal or having them outside, don't forget they can get frost bite on their paws and ears! The tricky thing about frostbite is that it's not immediately obvious. The tissue doesn't show signs of the damage to it for several days**

SIGNS of FROSTBITE:

- **First degree frostbite, are easy to miss but look for pale skin at the extremities of your dog such as, the ears, lips, tail, face, feet, and scrotum; the affected area may also be hard or cold to the touch. When the dog warms, its skin will look red, swell, and will become painful before turning scaly. If your dog's circulation has been badly affected, the tips of its extremities may even rub off; careful handling is essential.**
- **Second degree frostbite will also see your dog developing skin blisters.**
- **Third degree frostbite, the most serious, can be identified through your dog's skin turning dark or black over a period of several days. Where the flesh is badly injured, there is usually a clear difference/line between damaged and healthy tissue. Sometimes third degree frostbite results in gangrene and the necessity to amputate an affected area or limb.**

SIGNS OF HYPOTHERMIA:

**~ shivering ~ low heart and breathing rates ~ lethargy ~ muscle stiffness
~ lack of co-ordination ~ fixed and dilated pupils ~collapse ~ coma**

With mild hypothermia your dog is likely to be shivering and appear lethargic. As the hypothermia increases in severity the other symptoms become evident - effectively your dog becomes increasingly unresponsive as his body goes into heat conservation mode. At this time your dog's focus will be on keeping his vital organs working by restricting the blood flow to all but these parts of his body. If it's not treated, hypothermia can be fatal.

**Pets that go outside can pick up rock salt, ice, and chemical ice melts in their foot pads. To keep the pads from getting chapped and raw, wipe the feet with a washcloth when they come inside. This will also keep them from licking the salt, which could cause an inflammation of the digestive tract.*

**And always vaccinate your animals, it's a small price to pay to keep your pets healthy!*

Remember not every dog or cat is use to being approached by people, children, or other animals use caution and ask the owner if you can pet their animal. Never allow a child to run up and grab a dog or cat. **AVOID BEING BIT!*

Reminder: diligent pet owners not only have a city license, but they also are sure to have their pet wearing it!! (This tag will allow us to get lost pets home MUCH faster and saves you money too!)
